WARTHOG – M12 FORCE APPLICATION VEHICLE

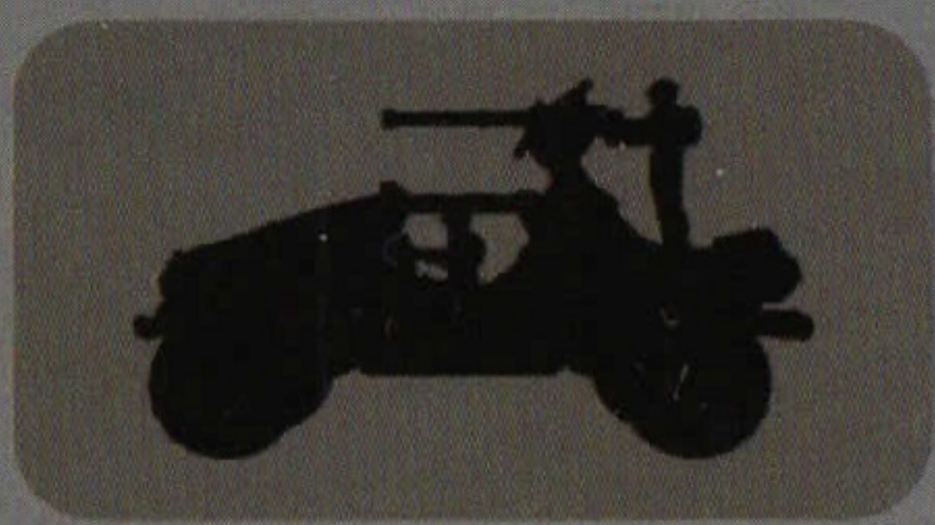
TYPE	ELEMENTS	POINTS
ARMOURED	1-2	120 EACH

OPTIONAL



The M12 Warthog is a large four-wheel drive all-terrain utility vehicle. Although some Warthogs are used solely for transportation, most are armed and have a multi-mission capability. The standard Warthog offers two seats (driver, side passenger) and a cargo bed for carrying equipment or a turret-mounted weapon system. Variants of the Warthog have been in service with UNSC forces for over two centuries.

The most common Warthog platform is the M12 Light Reconnaissance Vehicle (LRV) fitted with a pneumatically powered, 360-degree rotation multi-purpose M46 Vulcan Machine Gun. Other major variants include: M12R 'Rocket Hog' Light Anti-Armour Vehicle (LAAV) fitted with a M79 Multiple Launch Rocket System, M12G 'Gauss Hog' armed with a devastating M68 Gauss Cannon, and the M831 'Troop Hog' with additional bench seating.

The Warthog is an adaptable vehicle, and each variant has a specific niche on the battlefield. When in doubt, the basic Warthog LRV is never a bad choice.
